

GALAXY GLASS & STONE

At Galaxy we are passionate about being as environmentally responsible as possible. Not because we need to be, but because we want to be. We refuse to use the harsh chemicals and paints that have become the industry norm and spend a good deal of our energy sourcing environmentally friendly alternatives. Our manufacturing processes utilize coatings with zero VOCs and many of our machines run on natural gas.

Our advanced technologies allow us the ability to color match any color swatch you provide -- even earth tones like these!

Galaxy has supplied Glass products which have helped Architects and Designers achieve LEED certification for numerous projects across the globe.

Join our exclusive gallery for hundreds of images of our sample library where you can find a product for your next LEED certified project.
